Written Summary / Plan
Graham Vickers, James Pratt
MMED-1055

1. Implement a light box for our Hero gallery
2. Use JavaScript to display more information about a specific article when clicking a 'read more' button
3. Use JavaScript to create a 'hamburger menu for mobile
4. Implement green-sock to animate the navigation underline on hover being drawn.

The basis of our JavaScript is to be eye-catching, yet now intrusive. The Hero gallery will display a cycle of no more than 5 images. Any more than that is wasting the users time on the page. Next, the articles will have a brief amount of copy, followed by 3 dots (…) and a button that reads, "display more". When clicked, the article will expand, as well as change the button to display "display less". As well, we plan to have an animated company bio. On desktop, the companies will be listed on the left with an open text space on the right. When a company is clicked on, the company's bio will display, hiding another company's bio if already shown.
